ROBIN WARD

COMP 7376

3/11/2020

Homework 2 Robin Ward

compute $H(P)$, $H(C)$, $H(K)$, $H(K|C)$, $H(P|C)$

$$\begin{aligned} H(P) &= .5 \log_2 2 + \frac{1}{3} \log_2 3 + \frac{1}{6} \log_2 6 \\ &= \frac{2}{3} + \frac{1}{2} \log_2 3 \approx \boxed{1.459} \end{aligned}$$

$H(C) = C$ distribution

$$\begin{aligned} \Pr[Y=1] &= \frac{2}{9} \\ \Pr[Y=2] &= \frac{5}{18} \\ \Pr[Y=3] &= \frac{1}{3} \\ \Pr[Y=4] &= \frac{1}{6} \end{aligned}$$

$$\begin{aligned} &\rightarrow -\frac{2}{9} \log_2 \frac{2}{9} - \frac{5}{18} \log_2 \frac{5}{18} - \frac{1}{3} \log_2 \frac{1}{3} - \frac{1}{6} \log_2 \frac{1}{6} \\ &\approx \boxed{1.955} \end{aligned}$$

$$\begin{aligned} H(K) &= \frac{1}{3} \log_2 3 + \frac{1}{3} \log_2 3 + \frac{1}{3} \log_2 3 \\ &\approx \boxed{1.585} \end{aligned}$$

$$\begin{aligned} H(K|C) &= H(K) + H(P) - H(C) \\ &\approx \boxed{1.089} \end{aligned}$$

$$H(P|C) = H(K) + H(P) - H(C) \approx 1.089$$

$$\begin{aligned}
 x &\equiv 12 \pmod{25} \\
 x &\equiv 9 \pmod{26} \\
 x &\equiv 23 \pmod{27}
 \end{aligned}$$

$$\begin{aligned}
 a_1 &= 12, a_2 = 9, a_3 = 23 \\
 m_1 &= 25, m_2 = 26, m_3 = 27
 \end{aligned}$$

$$M = 25, 26, 27 = 17550$$

$$M_1 = \frac{M}{m_1} = \frac{17550}{25} = 702$$

$$M_2 = \frac{M}{m_2} = \frac{17550}{26} = 675$$

$$M_3 = \frac{M}{m_3} = \frac{17550}{27} = 650$$

$$\begin{aligned}
 702 y_1 &\equiv 1 \pmod{25} \Rightarrow y_1 = 13 \\
 675 y_2 &\equiv 1 \pmod{26} \Rightarrow y_2 = 25 \\
 650 y_3 &\equiv 1 \pmod{27} \Rightarrow y_3 = 14
 \end{aligned}$$

$$x = a_1 m_1 y_1 + a_2 m_2 y_2 + a_3 m_3 y_3 \pmod{M}$$

$$\begin{aligned}
 x &= (12 \times 702 \times 13) + (9 \times 675 \times 25) \\
 &\quad + (23 \times 650 \times 14) \pmod{17550}
 \end{aligned}$$

$$x = (109512 + 151875 + 209300) \pmod{17550}$$

$$x = 470687 \pmod{17550}$$

$$\Rightarrow x \equiv 14387 \pmod{17550}$$

$$x = \boxed{14387}$$

A. $p = 227$
 $a = 2$

- $a^{32} \bmod p = 2^{32} \bmod 227 = 176 = 2^4 \times 11$
- $a^{40} \bmod p = 2^{40} \bmod 227 = 110 = 2 \times 5 \times 11$
- $a^{59} \bmod p = 2^{59} \bmod 227 = 60 = 2^2 \times 3 \times 5$
- $a^{96} \bmod p = 2^{96} \bmod 227 = 28 = 2^2 \times 7$

B.

$$\log_2 = 1$$

$$- \log_3 = 46$$

$$- \log_5 = 11$$

$$- \log_7 = 154$$

$$- \log_{11} = 28$$

3.

$$\text{GCD}(57, 93)$$

$$93 = 1(57) + 36$$

$$57 = 1(36) + 21$$

$$36 = 1(21) + 15$$

$$21 = 1(15) + 6$$

$$15 = 2(6) + 3$$

$$6 = 2(3) + 0$$

$$36 = 93 - 1(57)$$

$$21 = 57 - 1(36)$$

$$15 = 36 - 1(21)$$

$$6 = 21 - 1(15)$$

$$3 = 15 - 2(6)$$

$$= 3(15) - 2(21)$$

$$= 3(36 - 1(21)) - 2(21)$$

$$= 3(36) - 5(21)$$

$$= 3(36) - 5(57 - 1(36))$$

$$= 8(36) - 5(57)$$

$$= 8(93 - 1(57)) - 5(57)$$

$$= 8(93) - 13(57)$$

$$= \text{GCD}(57, 93) = 3 = 8(93) - 13(57)$$
